

The Eagle Has Landed

The Extraordinary Flight of Apollo 11

Sharing the Wonders of the Universe

Celebrate One of the Greatest Achievements in Human History

Fifty years ago, July 16, 1969, three men launched from Kennedy Space Center, FL to fulfill a mission set out by President John F. Kennedy – land men on the moon and return them home safely. Neil Armstrong, Buzz Aldrin and Michael Collins did just that, and for that moment, the world united and celebrated this incredible feat.

The Apollo 11 broadcasts reached as many as one billion viewers, or most everyone on Earth within reach of the satellite television signal, which at the time was the largest audience ever assembled for any human event. It had a profound philosophical effect on society, an existential moment experienced via global television, a moment that remains unrivaled in the history of our species.

Apollo 11 showed what happens when humanity aims high, when science, technology, engineering and creativity are united in achieving something truly great for the human species. It's one of the greatest achievements in human history.

This special multimedia program is 60 minutes in length, delivered live by a professional science communicator from Link Institute, and uses the latest in theater screen digital imagery, animations, music and multimedia technology.
